

CLAIMS

Please amend the claims as follows:

1. (Canceled)
2. (Currently Amended) The method of claim 3, [[1]] wherein said predefined event comprises the receipt of an acknowledgment message.
3. (Currently Amended) A method for transmitting time-sensitive information over a wireless voice-over-data communication system, used in conjunction with a predefined data protocol, comprising:
 - defining a minimum segment size for information to be transmitted;
 - defining a maximum segment size for information to be transmitted, said maximum segment size greater than said minimum segment size;
 - generating a first segment from said time-sensitive information if a sufficient quantity of said time-sensitive information is available for transmission, said first segment having a segment size between said minimum segment size and said maximum segment size; and
 - generating a second segment having a segment size less than or equal to said maximum segment size upon the occurrence of a predefined event,

~~The method of claim 1~~ wherein said maximum segment size is negotiated between a transmitter and a receiver.
4. (Original) An apparatus for transmitting time-sensitive information over a wireless voice-over-data communication system, used in conjunction with a predefined data protocol, comprising:
 - means for negotiating a maximum segment size with a receiver;
 - a memory for storing a minimum segment size;
 - a queue for storing data frames, said data frames representing time-sensitive information;and

a first processor for generating at least one segment from said data frames stored within said queue when a segment size greater than or equal to said minimum segment size can be generated from said data frames.

5. (Original) The apparatus of claim 4, further comprising a vocoder for generating data frames from said time-sensitive information.

Claims 6-11 (Canceled)
